

## Male Necklift FAQ's

**Q: How long will I need to stay out of the public eye following Necklift surgery?**

A: You will be bruised and swollen for the first week, but after that you should feel comfortable returning to normal. You may want to wear your hair a little longer for this post operative phase to hide any stitches and new scars.

**Q: Can I have liposuction to my neck?**

A: Yes, liposuction is commonly performed in conjunction with neck lift surgery if there is a problem of excess fat in the neck. If you have no excess skin, and just excess fat, then liposuction alone may be all that you require. Dr McGovern can discuss this with you on examination.

We offer a free consultation service with our registered nurses to answer all of your questions at no cost to you. To take advantage of this offer, contact us today
