

Male Chemical Peel/Skin Peel

Q: My skin is looking tired and starting to look older, what can I do?

A: A good kick start to neglected skin is a series of skin peels . They help to remove the dead layers of skin and increase your cellular turnover to reveal healthy, youthful skin. Skin peels also help to increase your collagen production, resulting in more elastic skin that doesn't line as easily. There are many different types of peels available. We only do "medical grade" peels which are guaranteed to improve the look and feel of your skin.

Q: I have heavy lines from my nose down to my mouth, can I have a peel to get rid of this?

A: No. In this case you would need either dermal fillers to plump out the lines, or in severe cases where jowling is also a problem, then facial surgery may be required.

Q: Do Men have skin peels or they only for girls?

A: Men have been looking after their skin for years and utilising chemical skin peels in their armamentarium. Our clinic is very professional and unisex. You'll feel at home, and look good!
